

Data Storage and Analysis Software for TMS-5441 & TMS-5141 Instruments

Key Features

- Multiplant / Instrument Functionality
- Multi User
- Client / Server Architecture
- Data Storage in SQL Database
- Build-in Data replication
- Historical trend and Event based Datastorage and Visualisation

Applications

- Turbo Generators
- Hydro Generators
- Large Industrial Motors

TMS-2000

General Description

The **TMS-2000** Data Storage and Visualisation is a multiplant / multiuser capable data storage software ideally made for analysis of partial discharge results over mutple plants and units. The server / client structure allows to store data locally and visualize data from local or remote client.

Data is stored within a SQL based database running on a windows based computer. The build in replication service allows to have either a live backup server or allows to merge multiple databases into one single one (Data centralisation within e.g. Company Headquarter)

2D Partial Discharge Pattern

3D Partial Discharge Pattern

Pulse Height Distribution

Polar View

Trend Parameters

Per Individual PD Channel, the following parameters are available for long term trend:
Number of Pulses, Pulse Repetition Rate, Quadratic Rate, Average Discharge Current, Apparent Charge, PD Level @ 5 PPS, PD Level @ 10 PPS

General Specifications

General:

Supported Database: Postgres SQL 8.4
Backup: Build in
DB Merging: Build in (star)

Supported Operating Systems

Windows XP
Windows vista (32bit)
Windows 7 (32bit)

TMS-2000 Server

Max Number of Instr. per server: 32

Minimum System Requirements

Disc Space (application only) 150MB
Memory RAM 2GB

TMS-2000 Client

Max Number of Users: unlimited Screen Resolution 1600 x 900pxl (16:10)
